Dear data analysis team,

I'm very excited to apply for the job of a data analyst at your company, I'm a passionate beginner data analyst with a huge dedication for investigating and analyzing data and making insights and conclusions about data, I would love to work at your company, and I think I will be a good fit for you.

I have recently worked on data analysis projects the most recent of them was analyzing a flight cancellation dataset which I had some useful insights about cities that have the most cancellations and some of the potential causes for this problem by analyzing the data, time, airports, and flights.

To improve myself in this area I recently finished the Udacity nanodegree for data analysis which improved my SQL and Python skills while also making me work on real life projects to further improve my data analysis mindset and skills.

I hope to being my passion and vision to your working team, I'm available for meeting and to contact via e-mail, I look forward to hearing from you soon, thanks for your consideration.

Best regards,

Mostafa Zaki
